ENSTA BRETAGNE

Description

Type of entity	Not applicable
Main activity	ENSTA Bretagne, Ecole Nationale Supérieure de Techniques Avancées Bretagne (formerly ENSIETA), is a French national postgraduate engineering research institute. This multi-disciplinary engineering school operates under the auspices of the French Defence Procurement Agency (DGA). In conjunction with ENSTA ParisTech, it forms a group of institutes of advanced technology, recognised for outstanding performance in their fields of expertise: energy, transport, marine engineering and major industrial systems. It caters for 650 students trained in a 'systems approach': in an international context, they have the capacity to design and create complex industrial systems combining mechanics, electronics and IT in all sectors of industry ? shipbuilding, aeronautics, automotive, telecommunications, defence, etc.). The success of ENSTA Bretagne continues to grow year on year, and its graduates are snapped up by the sectors in which their skills are a perfect fit. Located in Brest, the European capital of marine science and technology, ENSTA Bretagne notably offers in-depth study of naval architecture and offshore engineering as well as unique training courses in France for hydrography engineers and specialists in marine renewable energies.
